

NUTRIVITALITY

A better you, every day

Enhancing your life with
supplements that work

Manufacturing the highest quality liposomal & liquid products for worldwide distribution.

Why Liquids?

All nutrients must be liquid before they can reach the cells of the body, where they are used. The nearer nutrients are to this state before they are taken, the quicker and the more completely they will be absorbed. So, we make our products in liquid form, ready for absorption well in advance of going into your body.

Liquids are also a great option for those who don't like, or who have trouble, swallowing pills and capsules. Our range includes sachets for on-the-go, drinks, mouth sprays and dropper bottles for ease of use depending on the target consumer.

Liquids also offer more flexibility in dosing, meaning we can incorporate formulas which wouldn't be possible in tablets; for example our Skinglo Collagen drink which includes 8 grams of collagen per dose.

Liquids also offer typically higher and quicker levels of nutritional delivery than tablets and capsules which can suffer from low absorption levels.

Each Nutrivitality supplement has been formulated to deliver the optimum performance across a number of different delivery methods. Each supplement is carefully bottled with Nitrogen headspace, ensuring each drop is as fresh when opened, as it was when it was carefully made.

Intra-oral absorption

All our supplements begin to be absorbed as soon as they enter the body, but orally-absorbed supplements go further and makes use of the absorption potential of the mouth. Our sprays access the soft absorbent tissue and their proximity to the veins below to further aid absorption.

Bottles

Our bottles are typically the best format for ingredients where the API requires 5ml or more and comes with a measuring device of either a syringe or incremented measuring cup. This enables easy dosing and can be added to a drink or taken undiluted straight from the bottle.

Dropper Bottle

Our droppers pack a punch! They provide meaningful strength in a small volume which allows for dosing under the tongue or with a drink.

Sprays

Intra-oral sprays offer the ultimate in convenience allowing you to take Nutrivitality on the go. A great option for children and the elderly who prefer this delivery method, sprays do not need to be taken with a drink or food and are an ideal substitute to traditional supplementation.

ClearVision

with Zinc, for maintaining normal vision

- Supports normal vision & eyesight
- Easy to swallow liquid
- Contains essential carotenoids & zinc
- Scientifically proven formula
- Liquid for maximum absorption
- New improved Natural Forest Fruits Flavour

Liquid for
maximum
absorption

ClearVision from Nutrivity is specially formulated by scientists, in collaboration with leading eye experts to support and maintain your vision.

ClearVision is based on comprehensive clinical study, and contains all three macula carotenoids: Meso-zeaxanthin, Zeaxanthin and Lutein. These three carotenoids are found in high concentration in different areas at the back of the eye (the macula), where they form the macula pigment; which is yellow in colour.

The macula is a vital part of the eye which is responsible for focusing on detail and clarity in the very centre of our field of vision. The macula lutea absorbs blue and ultraviolet light that enters the eye to protect the retina and hence protect the clarity and quality of our sight. These essential ingredients of the eye need to be replenished over time through nutrition.

ClearVision is designed to help get these vital nutrients to where you need them.

Why Liposomes?

NutriProtect Liposome Technology is our proprietary delivery mechanism for our liquid products, enabling the best possible products with the highest absorption.

Our liposome range offers all the advantages of liquids but delivers even higher reliable absorption due to the unique way liposomes are deployed. In addition to this, liposomes deliver nutrients intracellularly which enables the nutrients to get to parts of the body where they are most needed. Each dose of our liposome products contains over 15 million liposomes working to maximise the effect of the active ingredient.

What is a Liposome?

A liposome is a sphere of phospholipid (molecules containing fatty acid chains attached to a phosphate-containing group), suspended in a liquid medium, usually water.

Phospholipids have both hydrophilic (water-loving) and hydrophobic (water-repelling) regions, hence form spheres in water, with the hydrophilic groups facing outwards, towards the water and the hydrophobic groups facing inwards, away from the water.

Liposomes are also characterised as bilayers, meaning they have a double layer of phospholipid. Inside the sphere is a small compartment of water too, where water soluble drugs or vitamins can be incorporated for delivery into the body.

Liposomes act like little life-jackets that protect nutrients as they make their way through your body.

Once nutrients have been swallowed, they must survive exposure to digestive enzymes and acids, bile salts and various gut flora before they can be metabolised by the liver and be used in the body.

Liposomes enable much more of those nutrients to survive this journey and be absorbed effectively.

NutriProtect Technology

Our unique technology guarantees our liposomal products and the highest possible rates of absorption. With millions of liposomes per serving we make sure each drop is protected from the harsh environment of the stomach and arrives where your body needs it most. NutriProtect ensures that nutritional delivery is achieved on time, every time.

Our Liposome Quality Assurance

Not all Liposomes are equal. Liposomal manufacture is a very precise and a technical science to ensure a quality and stable product. There are a number of things to look out for:

Alcohol

Some liposomal supplements are made with added alcohol since this can be used to stabilise the liposomes. This can be up to 15% in some cases. At Nutrivitality, we don't believe in adding alcohol into health foods, and have developed a special method to remove alcohol from our products whilst keeping them fully stable.

Liposomal sizing

Size is essential for optimal absorption. Too big and absorption becomes difficult, too small and they carry smaller amounts of nutrients which can get stuck in the body. The ideal is a range of sizes between 100nm-250nm across. Our liposomes are manufactured to this size and are characterized in the laboratory under Electron Microscopes and other laboratory techniques.

Stability & Shelf Life

Liposomes can be unstable if not formulated correctly or created without precision. They can collide and merge to become the wrong size or even fall apart completely leading to the product containing no liposomed content. Additionally, many nutrients and liposomes themselves can be unstable when subjected to air. Nutrivitality liposomes are completely stable until the expiry date of the product, meaning you get the best absorption possible.

Ingredients

Ingredients used in liposomal products are critical to the stability and performance of the product itself. Poorly chosen ingredients can lead to liposomes splitting over time. Nutrivitality focuses on pure, quality ingredients which have been quality tested to ensure the product is stable over time and delivers the stated dose.

Our Formats

Each format of our liposome range has been engineered to ensure consistency, liposome sizing and distribution of our active ingredients and is carefully packaged and topped with Nitrogen headspace ensuring maximum freshness when the consumer opens the product.

Bottles

Our bottles are typically the best format for ingredients where the API requires 5ml or more. This format enables easy dosing and can be added to a drink or enjoyed undiluted thanks to our natural flavours. Our bottles come with a measuring device of either a syringe or incremented measuring cup.

Sachets

Our beautiful sachets are ideal for taking single doses on the go. Coming in a range of sizes to suit each product dose, they are designed to be enjoyed straight from the sachet or added to a drink or smoothie. In a pre-measured dose with easy tear top and nozzle for easy consumption this is the easiest way to carry a once a day dosage with you anywhere.

Intra-oral absorption

All our supplements begin to be absorbed as soon as they enter the body, but orally-absorbed liposomes offer the best efficacy matrix possible. Our liposome sizing is tailored for maximum absorption in the soft tissue of the mouth and its proximity to our vein system.

Dropper Bottle

Our droppers pack a punch offering meaningful strength in a small volume which allows for dosing under the tongue or with a drink.

Sprays

Intra-oral sprays offer the ultimate in convenience and performance allowing you to take Nutrivitality on the go. A great option for children and the elderly who prefer this delivery method, sprays do not need to be taken with a drink or food and are an ideal substitute to traditional supplementation. Our sprays ensure uniform distribution of droplets across the mouth while the sizing of our liposomes remains unaffected for maximum absorption.

Boost

NutriProtect liposomal B vitamin formula for the reduction of tiredness and fatigue.

B vitamins are essential to keep you energised and focused throughout your day. They are needed for the body's metabolism to maintain energy levels and allow you to keep going for longer.

B vitamins are essential for your mental performance too, contributing to the performance of your psychological systems, supporting your mental performance and allowing you to focus on the task in hand.

Additionally, B vitamins help keep our skin, hair and nails healthy too. Nutrivitality Boost utilises our NutriProtect Technology to ensure maximum absorption of these essential vitamins into your body.

Ingredient	Quantity	NRV%
Vitamin B1 (Thiamine)	1.1mg	100%
Vitamin B2 (Riboflavin)	1.4mg	100%
Vitamin B3 (Niacin)	16mg	100%
Vitamin B5 (Pantothenic Acid)	6mg	100%
Vitamin B6 (Pyridoxine Hydrochloride)	1.4mg	100%
Vitamin B7 (Biotin)	50µg	100%
Vitamin B9 (Folic Acid)	200µg	100%
Vitamin B12 (Methylcobalamin)	2.5µg	100%
Vitamin C (Ascorbic Acid)	500mg	625%

Immune Support

NutriProtect liposomal Vitamins C & B6, Selenium & Zinc for your immune system.

A healthy immune system is vital for your wellbeing, giving your body the nutrition it needs to maintain itself.

Studies show vitamin C and zinc are two of the most effective nutrients to support your immune system, however nutrients have to make it through the digestive system and achieve absorption, which usually isn't optimal.

Nutrivity Immune Support utilises NutriProtect Technology to enable the highest levels of absorption. NutriProtect uses a scientifically proven method of nutrient delivery using Liposomes. Liposomes are a specially designed delivery system, resistant to stomach acid and engineered on a nano scale to deliver targeted medication and nutrition. This means much more of the essential vitamins and minerals get into the body, ensuring it has the nutrients it needs to stay healthy and fend off colds and 'flus at their earliest point.

Ingredient	Quantity	NRV%
Vitamin C (Ascorbic Acid)	1000mg	1250%
Zinc (Zinc Gluconate)	10mg	100%
Vitamin B6 (Pyridoxine Hydrochloride)	1.4mg	100%
Selenium (Selenomethionine)	50µg	100%

SKINGLO

Unlock the formula to exceptional skin

A NEW WAY TO CARE FOR YOUR SKIN

External factors all contribute to the appearance of our skin; from make-up and sun exposure to stress and air pollution, our skin is slowly losing its vitality year by year. Whether you're suffering from a tired, dull complexion, or are worried about the appearance of fine lines and wrinkles, problems with our skin can negatively impact everyday life and often prevent you from feeling your best.

For years, we've been investing in topical treatments and invasive solutions to keep our skin looking youthful. Sadly, these attempts are not targeting the true cause of ageing – a lack of collagen. The only way to see real, long-lasting change is by encouraging our body to repair itself from within and keep our collagen levels topped up.

CARING FOR YOUR SKIN FROM WITHIN

The secret to a better complexion is to unlock what our bodies need to naturally revive the skin from within – that's where SkinGlo comes in. From Nutrivitality, the experts behind some of the most innovative supplements in the world, comes their newest innovation that has the nutrients you need to regenerate cells, improving your skin's vitality.

Drinking one sachet of SkinGlo each day will give you results from as little as two weeks, with noticeable strengthening of your nails and hair. After 4 weeks, you will notice a reduction in fine lines and wrinkles.

SkinGlo is scientifically formulated with ingredients that specifically target the skin in different ways.

Let's take a closer look at the ingredients in SkinGlo which make it such a powerhouse of anti-ageing goodness.

STUDIES

Peptan® Collagen

SkinGlo uses Peptan Collagen, one of the world's leading brands for collagen peptide supplements. Many in-vitro studies and clinical trials have been carried out, which demonstrates the numerous benefits (Journal of Cosmetic Dermatology, 2015).

Peptan is more easily absorbed by the body due to its shorter molecular structure. Marine Collagen also has a Dalton weight of around 2,000 meaning it contains more Collagen per gram than any other protein source. This hydrolysed, highly bio-available form of Collagen has a long history of safe and effective use as a supplement, and recent research shows Collagen peptides to have a proven benefit to the appearance of the skin.

SKIN HYDRATION

Skin hydration in the Peptan test group improved by 18% compared to placebo. A double-blind, placebo-controlled trial of Collagen among 33 women by Souken in Japan showed skin hydration increased by 28% after 8 weeks.

COLLAGEN FRAGMENTATION

Decrease in collagen fragmentation after intake of Peptan F at week 0 to 12. A double-blind, placebo-controlled trial of Collagen among 106 women aged 40-45. After 4 weeks of Collagen consumption, Collagen fragmentation decreased significantly in the deep layers of the skin. After 12 weeks, 31% reduction.

Ceramide Lipid Extract

SkinGlo contains Ceramides, a leading brand of supplemental Ceramides. The role of supplemental Ceramides has been proven to be clinically effective in helping the function and appearance of the skin.

Ceramides has been shown in studies to improve skin moisturisation by more than 16% compared to a placebo in as little as 15 days, and more than 21% compared to a placebo after 2 months. A further study showed a significant reduction in wrinkles after 2 weeks, and an improvement in skin's elasticity by more than 18% compared to a placebo after only 15 days.

MOISTURISATION

ELASTICITY

WRINKLES

It is clinically proven that Ceramides improve skin moisturisation by more than 16% vs. placebo in only 15 days (23% vs. baseline), and more than 21% vs. placebo after 2 months (36% vs. baseline). Significant results were also observed when measuring the transepidermal water loss.

The double blind clinical trial showed that reduction of wrinkles is significant after 2 weeks and skin elasticity is improved by more than 18% vs. placebo in only 15 days (15% vs. baseline), and more than 26% vs. placebo after 2 months (36% vs. baseline).

SKINGLO INGREDIENTS

Hydrolysed Marine Collagen

SkinGlo's key ingredient, Collagen, is a complex structural protein in the body that can be found in the skin, tendons, ligaments, cartilage, hair and nails. It's responsible for increasing the strength and elasticity of the skin.

It's the main structural protein in various connective tissues throughout our entire bodies, and therefore a fundamental building block. Collagen derives from the Greek word, kóllo, which means "glue". It's the most abundant protein that can be found in mammals, making up from 25% to 35% of the protein content in the body.

From our early 20's, we start to lose this key ingredient to a youthful complexion. Destruction of Collagen happens when enzymes are produced when exposed to ultraviolet radiation which degrades the skin's dermal layer. It is the destruction of the dermis layer that is believed to be one of the underlying factors in external skin ageing (Braverman, 1982). This can lead to a loss of elasticity in the skin, causing the appearance of fine lines and wrinkles.

As we begin to lose Collagen, keeping levels topped up can help reduce the signs of ageing as well as slow them down. Collagen supplements have been shown to help synthesise Collagen production and repair the structural components of the skin (Proksch et al, 2014).

SkinGlo contains the highest quality hydrolysed Marine Collagen. See the chapter "studies" for more information on SkinGlo Collagen.

Utilising NutriProtect liposomal technology to ensure maximum absorption.

INGREDIENTS BY MEASUREMENT

Ingredients	Daily Dose	NRV%
Hydrolysed Marine Collagen	8000mg	-
Methylsulfonylmethane (MSM)	500mg	-

Distribute Nutrivity

Liquid supplements are an exciting growing market and Nutrivity is quickly becoming a global leader in bringing new technology and choice to consumers all over the world through our network of distributors.

We are always looking for new partnerships and new distributors with dynamic people and companies who share our passion and values.

Scientifically Proven

Our liquid technologies have been developed over many years alongside leading UK universities resulting in industry-leading products with continual improvement. Our medical and forensic background enables us to apply the latest techniques and research to our development and manufacturing.

Quality

We are driven by quality in all that we do which starts at the ingredients, meaning every Nutrivity product contains nothing but the best for your body. Our products do not contain alcohol, dairy or GMO ingredients and are vegan wherever possible. We manufacture all our products in the UK above and beyond cGMP in our purpose-built facility to ensure we can match the strict requirements of customers worldwide.

Experienced Logistics

We pride ourselves on our level of service and logistics that already distributes products to over 70 countries worldwide and we are experienced in helping with regulation and registration requirements.

Next Level Technology

We are constantly expanding our technology and range so our customers can benefit from the latest supplements and ingredients. Our R&D pipeline is driven by our technical team of pharmacists and nutritionists where we evaluate new delivery mechanisms, novel ingredients and new trends allowing us to bring the latest innovations to market in a timely manner.

An Established Brand

Distributing Nutrivity allows you to concentrate on satisfying your market with established products from a beautiful brand. Our team will help you with marketing material, translations, logistics, registrations and region-specific requirements such as dosages.

Competitiveness

We aim to provide the best products for your markets at competitive prices.

OEM & White-labelling

Our OEM and white-labelling service allows customers access to cutting-edge turnkey products to order. This service combines all the advantages of our distribution with flexible manufacturing and packaging options meaning Nutrivity can be a one-stop for all your liquid product needs.

Please get in touch for more information.
